

Handling Instructions for Canvas

For this high-end canvas, special handling instructions are applicable. These should be followed strictly in order to ensure the best results:

Before Printing

- Avoid touching the printing surface of canvas, since the print quality could be influenced by skin grease and moisture.
- We recommend to use gloves when handling the media.
- Do not expose the canvas to extreme temperatures or humidity, or the image quality would be damaged.
- Avoid folding and only rolling the canvas.

During Printing

- Please print on the coated side.
- We recommend you to prepare different ICC profiles for different canvas items.
- For optimal results, when you printed with solvent, eco-solvent and water based inks we recommend you leave the printed sheets to dry for a few hours before storing, stacking, framing or displaying them.
- Compatibility levels of different inks depends on different coatings.

Package and Installation

1. We recommend to store canvas in a plastic bag and original box, in order to prevent damage to the printing surface.
2. We recommend the following storage conditions to preserve canvas: in a dark room; temperature of 15~25°C; humidity level of 40-60%.
3. If you ask for a perfect edge performance on the stretch frame, not each item is suitable, please contact with our sales.
